Ontologies

We did an overview on the code ithe colab notebook to grasp the main concepts based on the mined terms and draw on some subfields that would be interesting to model. Then, we used these concepts to come up with some questions to guide the modeling of the ontology. Some of these questions include:

1. What are the most prominent authors in the topic of promp engineering?
2. What LLM could I use to do term mining in Castillian Spanish?
3. Which company has spent the most amount of money in computing to train their flagship model?
